

BatchMaster Web ERP

Building the future
of businesses

BATCHMASTER[®]
Process Manufacturing Software

BatchMaster Web ERP

BatchMaster Web ERP is a powerful ERP software that offers your process manufacturing organization a simple, agile, and a hassle-free way to manage its business operations on the go. Built on the SaaS platform, BatchMaster Web ERP is a fully secure, scalable, and future-proof solution that can serve a range of global process manufacturing companies from the food and beverage, pharmaceutical, paints, coatings, chemicals, and cosmetics sectors, and can be easily tailored to their industry verticals and micro-verticals.

Works seamlessly with you, on the go!

BatchMaster Web ERP runs just with the URL, a web browser, internet-enabled device, and login credentials, offering you remote access to your business — from anywhere, anytime, in a secure, economic, and time-saving manner — along with the flexibility you need to respond dynamically in a fast-moving business environment. Equipped with a modern, customizable and intuitive UI, BatchMaster Web ERP delivers a set of dedicated business functionalities such as MPS & MRP, R&D and formulation, purchase, sales, finance, inventory management, costing, production, quality control, and compliance. Its key industry-specific functionality and know-how, powered with the ability to offer accurate insights & in-context analytics across departments, propels process manufacturing businesses to maximize productivity and profits.

Key Features

Anytime, anywhere, any device access -

Access to key business information from anywhere, anytime, and any compatible device having a reliable internet connection, while updating and uploading all the data on cloud in real-time.

Hits the ground running - Doesn't need any installation or any extra application to run, and can be set-up at a much faster rate, even allowing customizations to the basic design at a relatively rapid pace.

Scalable to the core - Comes with unparalleled capacity to handle the increased complexity associated with business growth, so that you can meet the requirements of your growing business, and address the challenges and demands that come alongside.

Delivers cost savings - With no need of heavy investment on the IT front, and also on maintaining the servers, support, upgrades' installation, service packs, and security fixes, it delivers significant cost savings.

Great deal of security - Offers higher degree of information safety and ensures secure encryptions, so that businesses can comply with standard data privacy regulations and follow predefined procedures to forecast risks and respond to malicious activities.

Faster, stronger, better - Ensures right information reaches to the right person at the right time, at the pace your business demands, through smart workflows and alerts, faster reporting, and in-context analytics.

Consistent user experience - Every user gets the same consistent experience with the same user interface and a single login and workflow, no matter what device they are accessing it from.

Simplifies operations on the whole - Streamlines back-office process automation, improves business among customers, suppliers & partners, and provides real-time information about business operations through its analytics & reporting.

Core Capabilities

The multitude of functionality available in BatchMaster's different modules listed below is far too extensive to be covered adequately within this short overview, yet we have tried to cover as much as we could.

Laboratory & Formula Management

- Separation of formulas from finished goods packaging bills of material.
- Formula security with approval, status, and complete audit trail tracking.
- Formula version control with roll-back capability
- Embed QC test, special instructions and costs.
- Dynamic reformulation based upon ingredient characteristics, product weight, volume and cost.
- Perform formula "what if" analysis and side by side comparisons.
- Define multiple fill-levels and packaging sizes of the products with the same recipes.

Traceability & Compliance

- Control formula access and maintain change history log.
- Track your products from receipt to shipment and vice-versa.
- Speed up lot recalls and audits.
- Design and print nutritional labels and supplemental information panels.
- Generate bi-directional lot traceability reports and specific product labelling and industry standard compliance reports.
- Design and produce lot recall letters.
- Support FDA, 21 CFR Part 11, GFSI and cGMP requirements.

Planning & Scheduling (MRP/MPS)

- Minimize inventory, utility costs with the assurance that there will be no shortages during production.
- Direct transfer of MPS/MRP orders to purchase and production.
- Use real-time information of demand/supply for purchase discounts and optimization of batch production schedules.
- Capable of handling both make-to-stock (forecast) and make-to-order (SO) demands.
- Auto generation of production schedules based on the demand.
- Considers both purchase and QC lead time to ensure on-time delivery.
-

Quality Control & Quality Assurance

- Establish library of standardized QC tests and sample plans.
- Define QC tests for formulas, raw materials, intermediates, and finished goods.
- Ensure the step by step completion of QC tests.
- Auto assign lot statuses and disposition lots, based upon QC test results.
- Analyze QC tests results by item, lot, batch job and vendor.
- Auto-generation of non-conformance for failed QC tests with provision of CAPA.

Core Capabilities

Inventory Management

- Maintain multiple units of measurements and conversions.
- Manage lot controlled inventory based upon variable inventory characteristics, including quality status, expiration dates, and strength or potency values.
- Manage inventory down to the bin level.
- Perform physical counts against selected inventory.
- Perform inventory revaluation.
- Capture and track inventory adjustments and movements.

Batch Production

- Dynamically size batch jobs.
- Prioritize and expedite specific batch production jobs.
- Auto-create production order against sales orders.
- Report shortages of required ingredients and materials.
- Reserve lot controlled inventory for batch jobs.
- Manage single super batch job consisting of multiple linked batch jobs.
- Adjust batch formula prior to batch job release and during WIP.
- Auto generate lot numbers for intermediates and finished goods.
- Mandate execution of QC tests and manufacturing instructions.
- Auto back flush consumed ingredients and materials.

Product Costing

- Calculate expected finished good costs, including intermediates and assemblies, based upon the cost rollup of ingredients and packaging materials, as well as labour, setup and other production costs.
- Dynamically resize formulas to meet target costs.
- Perform 'what-if' cost scenarios.
- Compare costs for same formulas in different packaging configurations.
- Reevaluate finished goods costs based on line item price-lists, special pricing and discount offers.

Sales Management

- Easily generate sales quotations and orders, and handle returns.
- Single click transfer of quotes to order, and order to shipment.
- Volume-based scaled pricing, discounts, and mark-ups.
- Confirm and processes shipments, partial shipments, and back orders, and check inventory for parts' availability.
- Define contracts & warranty, and generate sales reports, picklist, invoices, BOL, and COA.

Core Capabilities

Purchase Management

- Create purchase requests, purchase orders, and define approvals.
- Maintain several price-list options to manage purchases, returns, and blanket agreements.
- Real-time dashboard to analyze & assess vendor, discounts, tax, contract, and other information.
- Support to supplier management, audit warnings, and purchase of cGMP material only from item-specific vendors.
- Achieve real-time synchronization of goods receipts and inventory warehouse levels.

Finance

- Streamline your financial operations by maintaining ledger, journal entries, tax calculations, multi-currency transactions and banking activities.
- Manage cash flow, track budgets, and compare actual versus plans to see where your business stands at a moment's notice.
- Integration of financial operations in real-time with other business processes, for example purchasing and sales, to improve visibility into cash flow.
